# **DURABOLT™** PRINTBAR

*WIDE WEB HIGH-SPEED PRINTING*

**memjet**®

*Beautiful Precision, Simplicity and Flexibility*

## Fully Stitched Wide Web Printing at 1600 dpi

*The DuraBolt PrintBar is a high-volume, monochrome print solution designed to deliver exceptional speed in wide web applications. Sold directly to printers, this ultramodern print system enables printers to create advanced hybrid printing solutions at an attractive price point.*

The DuraBolt PrintBar is a powerful print solution that delivers Memjet's hallmark 1600 dpi print quality across wide web monochrome applications. It provides printers with a new opportunity for profitable production imprinting with customizable functionality delivered at exceptional value. DuraBolt PrintBar is easily integrated into existing infrastructure and is augmented by a sophisticated digital front end (DFE) that provides highly intuitive operations.

### **Hybrid Printing at Offset Print Speeds**

The DuraBolt technology series has been engineered for high speeds and outstanding print quality for print widths up to 39.25 inches. The DuraBolt PrintBar can deliver print speeds up to 980 feet per minute, while maintaining offset quality. It enables printers to build on their simple imprinting experience and turn their systems into true hybrid printing solutions with customizable functionality delivered at exceptional value. With print quality resolutions of 1600dpi, the DuraBolt PrintBar mimics offset quality using state-of-the-art printhead technology from Memjet. The solution includes printing and print control technology, simplified maintenance, automated print head tending, and a robust DFE.

**DuraBolt  
PrintBar**

### **Increase Productivity with 10x Nozzle Redundancy**

At the core of the DuraBolt PrintBar is a printhead based on Memjet's Advanced Thermal Inkjet Technology. This technology achieves drastic reductions in inkjet blockages and issues with an impressive 10 times nozzle redundancy. The 1600 dpi printheads feature 10 rows of nozzles firing 2.1 pL drops in patterns designed to minimize artifacts and reduce downtime.

### **Custom Digital Front End with Extensive Capabilities**

DuraBolt comes with a configurable, PDF based, Digital Front End (DFE) that streamlines interaction between the print engine and all aspects of the printing process. This delivers powerful process control, system automation and straightforward user operation. The print engine's custom Human Machine Interface provides an intuitive, interactive dashboard that includes real-time status of consumable levels, press components and environmental conditions.

### **Easy Integration for Advanced Hybrid Solutions**

Powerful ModBus solution architecture is a key feature of the DuraBolt PrintBar technology. It enables smooth integration with existing printing systems and product extensions, plus simplified control of the hybrid system.

### **Designed for Easy Self Maintenance**

The DuraBolt PrintBar is designed for easy self maintenance by customers. Self-service enables customers to address issues immediately rather than wait for a service engineer. This rapid recovery through simplified module replacement minimizes lost time and increases productivity.

**Seeing is Believing.**

# Reduce Costs and Enhance Productivity

*The DuraBolt PrintBar has been designed with cost savings and productivity gains in mind. With up to 30 per cent lower acquisition and running costs plus around 30 per cent increases in productivity, this powerful new technology delivers on its productivity promise.*

User-centricity was the focal point of Memjet's design decisions when developing the DuraBolt PrintBar. Extensive productivity gains have been made with rapid system start up, reduced make-ready times, and automated processes. Automatic maintenance and the elimination of printhead position adjustments answers industry calls for technology suited to a cost effective workforce of non-expert operators. Remarkably easy to use and providing seamless connectivity to existing printing systems, the DuraBolt PrintBar can significantly enhance productivity and profit.

## **Full Web Printing**

The DuraBolt PrintBar eliminates the need for true black plate changes on offset presses to simplify the process and reduce production times.

## **Automation and Simplicity**

Further productivity gains come from automated printhead calibration, which retains print quality from job to job. Configurable, automatic maintenance cycles mean minimal downtime. While the print engine's rapid start up supports further productivity gains. Periodic printhead replacement is quick and easy with no need for skilled technicians.

## **Eliminate Position Adjustments**

Streamlined job setup is achieved with a single line head that eliminates the need for position adjustments associated with multi-rail systems.

## **Minimized Need for Operator Intervention**

Easy to install, operate and maintain, the DuraBolt PrintBar minimizes operator involvement with advanced features such as automated head wiping, capping, and print gap positioning. Print-on-page positioning is also digitalized as are other general maintenance and cleaning operations. Additional options include air and humidity conditioning systems that minimize the impact of seasonal fluctuations on productivity.

## KEY FEATURES

*Wide format • Exceptional print quality • Offset • Easy integration • Intuitive digital front end • Rapid start up • Robust build • Extended print runs • No printhead position adjustments • Fast printhead maintenance and replacement • 10 times nozzle redundancy • Advanced aerosol extraction • Media path tension control • Dryer intensity control • Temperature and humidity monitoring • Cloud-based data capture • High value productivity insights.*

## DuraBolt PrintBar Specifications

| Parameter                    | Specification  |
|------------------------------|--|
| Digital Engine               | Memjet Advanced Thermal Inkjet   |
| Resolution                   | 1600 x 790 dpi   |
| Print width (Up to)          | 324 mm (12.75 inch)<br>645 mm (25.5 inch)<br>970 m (38.25 inch)              |
| Number of printheads         | 1 printhead for 324 mm<br>2 printheads for 645 mm<br>3 printheads for 970 mm |
| Printhead life               | Up to 500 L per printhead depending on job design                            |
| Ink type                     | Aqueous black pigmented ink in 55L containers                                |
| Nozzle redundancy            | 10 nozzles stacked and aligned   |
| Press footprint              | 680 mm (<27 inch)  |
| Maximum linear print speed   | 980 fpm  |
| Printhead maintenance system | Automated and configurable. Provides cap, wipe and purge functionality       |
| Fluid control system         | Precision ink supply system including ink recirculation                      |
| Alignment to offset shell    | Digital alignment with workflow. Fine-tuning via DFE.                        |
| Communication protocol       | ModBus TCP enabling PLC connectivity to various press and finishing items    |
| Digital Front End SW         | Integrated RIP and controller  |
| Interactive HMI / dashboard  | Integrated into DFE  |
| Workflow                     | PDF and PDF/VT   |
| Single mount print tower     | <b>Optional</b> , includes tach encoder and alignment sensor                 |
| Automated alignment system   | <b>Optional</b> , 2 cameras for auto head-to-head stitching                  |
| Environmental control system | <b>Optional</b> , humidity and temperature control                           |
| Operator training            | <b>Included</b>  |
